

Farm360™: 360° of Care!

Farm360 is a highly effective natural formula that breaks down organic waste and eliminates odor-causing compounds at the source. Once the powder formula is pre-activated with water, it works quickly to digest waste and other organic material, and to reduce the presence of harmful bacteria. Farm360 is long-lasting and particularly effective in eliminating strong odors.

- Removes rather than masks odors
- Reduces fly numbers by removing organic attractants
- Helps neutralize harmful ammonia
- Accelerates the decomposition of organic waste
- All-natural, chemical-free formula

Odor & Ammonia Control	Application Rate	Mixing (water)	Application	Re-application frequency
Floor area / bedding/coop	One 3.5 oz powder formula packet per 700 sq. ft.	Mix at a ratio of one 3.5 oz. powder formula per 20 gallons	Decant solution into sprayer or spray bottle. Spray over coop surfaces, bedding, floors, etc.	Apply when bedding is first laid or when coop is cleaned; reapply each week as necessary

Directions

Clean coops, bedding, grounds and other areas with Farm360 solution according to the following specifications:

- A 10-gallon quantity (approx. ½ packet) of Farm360 solution is sufficient to cover a total area of approx. 350 sq. ft.
- For the equivalent of a 350 sq. ft. area, thoroughly mix 1.75 oz. (50 grams) of Farm360 (approx. ½ packet) into 10 gallons of standard tap water. For smaller areas, mix 2 teaspoons per gallon. Allow the mixture to pre-activate for two to four hours. Stir well for a minute or so after the first two hours.
- Dispense the active solution evenly with a farm & garden sprayer, spray bottle or plant waterer.
- If other cleaning agents are used, it is highly recommended that Farm360 solution be the last solution sprayed onto coops/floors/pens/bedding after all other types of cleaning agents have been used. Repeat procedure at weekly intervals as necessary.
